Bank diversification

* Effective yield as at 30 October 2026. The effective yield grosses the net yield up for the PIE tax cap of 28% relative to the investor's tax rate. The yield calculation represents the estimated yield to maturity on the relevant security at the date specified and is not the actual return on the security.

** This is the annualised return since inception of the Portfolio. Returns are stated before NZ Funds' management fees, but after fund expenses and after investor tax of 28%.

NZ Funds takes Environmental, Social and Governance (ESG) criteria into account in its investment decisions. This impacts on our investment choices. Our ESG criteria are set out in the NZ Funds Active Series SIPO. NZ Funds is an active manager so the securities listed above may not be held in the future. Past performance is not an indicator of future returns. A full list of securities held by the Strategy is available through NZ Funds Digital Wallet. Rounding may affect totals.

New Zealand & Australian Bonds

NZ Funds Active Income Series

October 2026

A diversified portfolio of Australasian bonds

Potential for greater than term deposit returns

The Portfolio is primarily invested in New Zealand corporate bonds with an approximate time to maturity of between three and four years. Over the business cycle, the Portfolio offers investors the potential for greater than term deposit returns. Corporate bonds also typically offer higher yields than government bonds of similar duration.

The returns from a New Zealand bond portfolio do not typically rise and fall at the same time as the New Zealand share market, so owning both New Zealand and Australian shares and bonds can even out some of the volatility in an investor's portfolio. Cash and bonds can provide investors with a more stable source of funds for short and medium-term spending needs.

Professionally managed portfolio

The Portfolio offers investors a professionally managed selection of corporate bonds. Buying a diversified portfolio of corporate (or government) bonds directly can be difficult and expensive to achieve, as many bonds are primarily available for purchase at the time of issue. NZ Funds' Investment Team researches New Zealand bonds at issue and then purchases the bonds for the Portfolio, so investors can access them at will.

The Portfolio may also use professional investment tools and techniques which are not normally available to private investors. These include interest rate swap contracts with major trading banks to increase or reduce the Portfolio's exposure to interest rates at different points in time during the business cycle. The Portfolio may also own futures contracts and credit derivative swaps on diversified indices of corporate bonds to spread the risk of bond defaults over a larger number of corporate issues.

Highly liquid & convenient

Building an easily accessible but highly diversified portfolio of New Zealand and selected Australian bonds can be time consuming and expensive. It can also be difficult to withdraw or deposit small amounts regularly (for example, to fund retirement spending or family trust distributions) when bonds need to be purchased or sold individually.

By using a managed PIE portfolio, investors can deposit or withdraw in a highly liquid manner small or large amounts whenever they wish, and these amounts will be taken from (or applied to) all the securities in the Portfolio. This ensures each bond in the Portfolio retains its optimal weight. Similarly, all interest payments received are reinvested avoiding both administrative hassle and cost.

The New Zealand and Australian Bonds Portfolio forms part of the NZ Funds Active Income Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

Global Bonds

NZ Funds Active Income Series

October 2026

A diversified portfolio of global bonds

Potential for greater than term deposit returns

The Portfolio is primarily invested in USA-issued corporate bonds with a time to maturity of around three years. Over the business cycle, the Portfolio offers investors the potential for greater than term deposit returns. Global corporate bonds also typically offer higher yields than government bonds of similar duration.

The returns from USA-issued corporate bonds do not typically rise and fall at the same time as the global share market, so owning both shares and bonds can even out some of the volatility in an investor's portfolio and can provide clients with a more stable source of funds for short to medium-term purposes.

Professionally managed portfolio with currency hedging

The Portfolio offers clients a professionally-managed selection of global corporate bonds. By accessing these globally issued bonds through a portfolio, NZ Funds can ensure clients' foreign currency exposure is hedged back into New Zealand dollars, as and when is needed throughout the business cycle. NZ Funds' research and management team has been building and managing diversified portfolios of global bonds for New Zealand clients for over 20 years.

The Portfolio may also use professional investment tools and techniques which are not normally available to private investors. These include interest rate swap contracts with major trading banks to increase or reduce the Portfolio's exposure to interest rates at different points in time during the business cycle. The Portfolio may also own futures contracts and credit derivative swaps on highly-diversified indices of corporate bonds to spread the risk of bond defaults over a larger number of corporate issues.

Highly liquid & convenient

Building an easily accessible but highly diversified portfolio of global bonds is virtually impossible for retail investors as the minimum dollar amount for large global bond issues can be considerable. It would also be difficult to withdraw or deposit small amounts regularly (for example, to fund your retirement spending, or trust distributions) when bonds need to be purchased or sold individually.

By using a portfolio, clients can deposit or withdraw in a highly liquid manner small or large amounts whenever they wish, and these amounts will be taken from (or applied to) all the securities in the portfolio. This ensures each bond in the portfolio retains its optimal weight. Similarly, all interest payments received are reinvested avoiding both administrative hassle and cost.

The Global Bonds Portfolio forms part of the NZ Funds Active Income Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

New Zealand Property & Retirement Villages

NZ Funds Active Inflation Series

October 2026

Own what the economy can't do without: NZ Property & Villages

A diversified way to access New Zealand property

The Portfolio offers investors a unique combination of shares in the major New Zealand-listed property companies as well as leading retirement village operators. The listed property companies own a wide variety of property types including commercial, industrial, retail and healthcare. In contrast, the retirement village operators are exposed to large portfolios of residential property and derive their profits from the long-term appreciation of New Zealand residential property.

A solid hedge against inflation

Property has traditionally been viewed as a solid hedge against inflation. Rental contracts typically include provisions for periodic increases in line with, or ahead of, inflation. These adjustments ensure that as investors' cost of living rises, so too does the rental income generated from high quality property assets. Over longer periods of time the replacement cost of land and buildings also rises with inflation and is reflected in the asset value of listed property companies, enabling investors to also enjoy long-term capital gains.

Quality, transparency & liquidity

Listed property companies tend to own assets of substantial size and quality that are not ordinarily affordable for private investors such as shopping malls, office towers and hospitals. Because these properties are expensive to build there are few of them, which means there is increased demand from tenants. As a result, high quality assets suffer fewer vacancies. They are also commonly rented by large companies who are in a strong position to pay their rent.

The Portfolio is 100% transparent, so investors can see each of the property companies the Portfolio owns. By using a portfolio structure, clients can deposit or withdraw large or small amounts whenever they wish, without worrying about private or listed property liquidity, or worrying about portfolio rebalancing.

The New Zealand Property & Retirement Villages Portfolio forms part of the NZ Funds Active Inflation Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

New Zealand Infrastructure

NZ Funds Active Inflation Series

October 2026

Own what the economy can't do without: NZ Infrastructure

A diversified portfolio of Australasian infrastructure assets

The Portfolio offers investors the opportunity to invest in a range of New Zealand and certain Australian infrastructure assets. An infrastructure asset is a physical asset which is essential for an economy. They include physical infrastructure like roads, airports, seaports and waste management services as well electronic infrastructure like data centres and financial exchanges.

Infrastructure assets offer investors several benefits. They generally offer stable long-term returns. They enjoy relatively constant demand, regardless of the economic cycle, as infrastructure is needed every day for society to function. This makes them more resilient than many other types of investments in an economic downturn. Infrastructure assets also tend to hold monopoly positions and are less impacted by changes in science or technology.

A solid hedge against inflation

Most infrastructure investments have revenues that are contractually linked to inflation, such as tolls on toll-roads, waste management services or aircraft or seaport landing or docking fees. This can help maintain investors' purchasing power over time. As infrastructure assets generally have a long lifespan there is potential for significant capital appreciation of the asset as demand for it grows and the replacement cost of construction rises. Many infrastructure projects also receive support from governments through incentives, subsidies, or favourable regulatory frameworks, which can reduce risk and enhance returns for investors.

Quality, transparency & liquidity

A diversified portfolio of listed company shares enables investors to own a small fraction of a wide range of infrastructure projects which could not be accessed privately. Listed company status also ensures that corporate governance, financial position and management decisions are transparent and publicly accountable. Investors can see each of the companies the Portfolio owns and which infrastructure projects they own and operate. By using a portfolio structure, clients can deposit or withdraw large or small amounts whenever they wish, without worrying about liquidity or portfolio rebalancing.

The New Zealand Infrastructure Portfolio forms part of the NZ Funds Active Inflation Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

New Zealand Utilities

NZ Funds Active Inflation Series

October 2026

Own what the economy can't do without: NZ Utilities

A portfolio of primarily New Zealand-listed electricity producers

The Portfolio offers investors the opportunity to invest in the companies which operate the everyday essential public services of generating and distributing electricity throughout New Zealand. The Portfolio holds concentrated positions in three state or former state-owned electricity producers (Contact Energy, Meridian Energy and Mercury NZ) as well as community trust-controlled Vector. Together, these companies generate and distribute the bulk of New Zealand's retail, industrial and commercial electricity. The Portfolio also holds substantial positions in Chorus and Telstra. These formerly government-owned companies own large fibre-optic cable networks throughout New Zealand and Australia respectively.

A solid hedge against inflation

New Zealand utility companies' revenues and profits are closely linked to inflation through New Zealand's regulatory framework. This can help maintain investors' purchasing power over time. As utility assets generally have very long lifespans, there is potential for significant capital appreciation of the asset as demand grows and the replacement cost of construction rises. Many utility companies, including those in New Zealand, also receive support from governments through direct ownership, incentives, subsidies, or favourable regulatory frameworks, which can reduce risk and enhance returns for investors.

Quality, transparency & liquidity

A portfolio of utility company shares enables investors to own a small fraction of a large company which in turn may own a large portfolio of generation assets throughout the country. Listed company status also ensures that corporate governance, financial position and management decisions are transparent and publicly accountable. Investors can see each of the companies the Portfolio owns, and which electricity generation or lines projects the company owns and operates. By using a portfolio structure, clients can deposit or withdraw large or small amounts whenever they wish, without worrying about liquidity or portfolio rebalancing.

The New Zealand Utilities Portfolio forms part of the NZ Funds Active Inflation Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

Global Property

NZ Funds Active Inflation Series

October 2026

Own what the economy can't do without: Global Property

A diversified way to access global property

The perception of global property is of half-empty second-tier big city office buildings that are a source of risk for investors and lenders. However, this represents just a sliver of the global real estate market. The Portfolio invests in some of the largest listed property companies in the world who actively manage a highly diversified range of property assets including data centres, logistical hubs, residential homes, hospitals and public storage facilities. These assets offer clients attractive yields, diversification, and capital appreciation.

A solid hedge against inflation

Property has traditionally been viewed as a solid hedge against inflation. Rental contracts typically include provisions for periodic increases in line with, or ahead of, inflation. These adjustments ensure that as investors' cost of living rises, so too does the rental income generated from high quality property assets. Over longer periods of time the replacement cost of land and buildings also rises with inflation and is reflected in the asset value of listed property companies, enabling investors to also enjoy long-term capital gains.

Quality, transparency & liquidity

Listed property companies tend to own assets of substantial size and quality that are not ordinarily affordable for private investors such as shopping malls, data centres, hospitals. Because these properties are expensive to build there are few of them, which means there is increased demand from tenants. As a result, high quality assets suffer fewer vacancies. They are also commonly rented by large companies who are in a strong position to pay their rent.

The Portfolio is 100% transparent, so investors can see each of the property companies the Portfolio owns. By using a portfolio structure, clients can deposit or withdraw large or small amounts whenever they wish, without worrying about private or listed property liquidity, or worrying about portfolio rebalancing.

The Global Property Portfolio forms part of the NZ Funds Active Inflation Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

Global Infrastructure

NZ Funds Active Inflation Series

October 2026

Own what the economy can't do without: Global Infrastructure

Invested in some of the world's largest infrastructure assets

The Portfolio offers investors the opportunity to invest in world-leading infrastructure assets. An infrastructure asset is a physical asset which is essential for an economy. They include roads, bridges, railways and airports as well as mobile towers, satellite networks, water and waste management.

Infrastructure assets offer investors several benefits. They generally offer stable long-term returns. They enjoy relatively constant demand, regardless of the economic cycle, as infrastructure is needed every day for society to function. This makes them more resilient than many other types of investments in an economic downturn. Infrastructure assets also tend to hold monopoly positions and are less impacted by changes in science or technology.

A solid hedge against inflation

Most infrastructure investments have revenues that are contractually linked to inflation, such as tolls on toll-roads, waste management services or aircraft or seaport landing or docking fees. This can help maintain investors' purchasing power over time. As infrastructure assets generally have a long lifespan, there is potential for significant capital appreciation of the asset as demand for it grows and the replacement cost of construction rises. Many infrastructure projects also receive support from governments through incentives, subsidies, or favourable regulatory frameworks, which can reduce risk and enhance returns for investors.

Quality, transparency & liquidity

A diversified portfolio of listed company shares enables investors to own a small fraction of a wide range of infrastructure projects which could not be accessed privately. Listed company status also ensures that corporate governance, financial position and management decisions are transparent and publicly accountable. Investors can see each of the companies the Portfolio owns and which infrastructure projects they own and operate. By using a portfolio structure, clients can deposit or withdraw large or small amounts whenever they wish, without worrying about liquidity or portfolio rebalancing.

The Global Infrastructure Portfolio forms part of the NZ Funds Active Inflation Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. Global Utilities

NZ Funds Active Inflation Series

October 2026

Own what the economy can't do without: Global Utilities

A diversified portfolio of global utility companies

The Portfolio owns a diversified portfolio of global utility companies. Utility companies are companies that provide essential public services such as the generation and distribution of electricity, natural gas retailing or water and sewage services.

Utilities are often defensive investments because they tend to perform well in an economic downturn as people still need basic services like electricity, water and gas. Utilities are also known for paying consistent and often attractive dividends out of the strong free cash flow they can produce.

With increasing global focus on renewable energy, infrastructure upgrades and smart grids, utility companies have opportunities for growth through modernization and expansion into green energy. This shift can create long-term growth potential for utility investors.

A solid hedge against inflation

Utility companies' revenues and profits are closely linked to inflation through regulatory frameworks. This can help maintain investors' purchasing power over time. As utility assets generally have very long lifespans, there is potential for significant capital appreciation of the asset as demand grows and the replacement cost of construction rises. Many utility companies also receive support from governments through direct ownership, incentives, subsidies, or favourable regulatory frameworks, which can reduce risk and enhance returns for investors.

Quality, transparency & liquidity

A portfolio of utility company shares enables investors to own a small fraction of a large company which in turn may own a large portfolio assets. Listed company status also ensures that corporate governance, financial position and management decisions are transparent and publicly accountable. Investors can see each of the companies the Portfolio owns and where the utilities they own are located. By using a portfolio structure, clients can deposit or withdraw large or small amounts whenever they wish, without worrying about liquidity or portfolio rebalancing.

The Global Utilities Portfolio forms part of the NZ Funds Active Inflation Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

New Zealand & Australian Shares

NZ Funds Active Growth Series

October 2026

Own the best local companies and markets

Tax efficient, long-term capital appreciation

The New Zealand share market is one of the highest dividend-paying markets in the world, making it ideal for long-term investors. Over the last 40 years the New Zealand share market has grown from a handful of government-controlled companies to over 115 listed shares worth more than $100 billion.

By owning New Zealand and Australian shares in a PIE portfolio, investors pay no tax on capital gains and, because the maximum PIE tax rate is 28%, they do not need to pay any additional tax on fully-imputed New Zealand dividends. This highly advantageous tax treatment is a big reason why New Zealand shares are an investor favourite. However, we would never advocate putting all your investment eggs in one asset type (see the Global Shares and Global Macro Portfolios for long-term growth and diversification).

Professionally selected companies

NZ Funds New Zealand & Australian Shares Portfolio offers investors a professionally selected portfolio of between 20 and 30 companies. NZ Funds has been researching and investing in Australasian companies for over 30 years. We have research analysts in both New Zealand and Australia who curate a portfolio of companies to meet our criteria for quality, stability and long-term growth potential.

The Portfolio also holds Australian index futures to closely match the market returns of Australian share market index. This ensures investors benefit from owning both actively selected companies and the broader share market. By using index tracking futures, the Portfolio may be more than 100% invested (for example, 120% invested). This amplifies the opportunity for the Portfolio to generate returns over time but may also increase the risk of the Portfolio.

Highly liquid & convenient

Building an easily accessible but highly diversified portfolio of New Zealand and Australian shares can be time consuming and expensive. It can also be difficult to withdraw or deposit small amounts regularly (for example, to fund retirement spending or family trust distributions) when shares need to be purchased or sold individually.

By using a PIE portfolio, investors can deposit or withdraw in a highly liquid manner small or large amounts whenever they wish, and these amounts will be taken from (or applied to) all the securities in the Portfolio. This ensures each company in the Portfolio retains its optimal weight. Similarly, all dividends are reinvested avoiding both administrative hassle and cost.

The New Zealand & Australian Shares Portfolio forms part of the NZ Funds Active Growth Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

Global Shares

NZ Funds Active Growth Series

October 2026

Own the best global companies and markets

Long-term capital appreciation

Over long periods of time global shares have been one of the top performing asset types in the world, appreciating in real terms by around 7% per annum before fees and tax. Long term, they have offered investors the opportunity to, on average, double the value of their investment every 7 to 10 years (before fees, tax and expenses).

Global shares do not always rise and fall at the same time as the New Zealand share market, so owning both global shares and New Zealand and Australian shares can even out some of the volatility in a portfolio without reducing the potential for long-term capital appreciation, as can owning global macro assets (see Global Macro Portfolio).

Professionally selected companies

NZ Funds Global Shares Portfolio offers investors a professionally selected portfolio of over 100 global companies. NZ Funds works with world class investor Fisher Investments (based in California) to research and buy a portfolio of world class companies for investors.

The Portfolio also holds index futures to closely match the market returns of the global share market index. This ensures investors benefit from owning both actively chosen companies and the broader share market. By using index tracking futures, the Portfolio may be more than 100% invested (for example, 120% invested). This amplifies the opportunity for the Portfolio to generate returns over time, but may also increase the risk of the Portfolio.

Currency hedging & downside mitigation

Investing in global shares can mean investors are exposed to currency fluctuations. This is especially the case if shares are held directly via a share broker. NZ Funds can remove this uncertainty by actively hedging investments back into New Zealand dollars when the manager deems it appropriate to do so.

The Portfolio also offers investors the potential for downside mitigation during share market crashes through an actively managed portfolio of options managed by Universa (USA). The options are designed to reduce the degree to which the Portfolio drops in a significant market decline, which is defined as a drop of more than 20% in a single month.

The Global Shares Portfolio forms part of the NZ Funds Active Growth Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

Global Macro

NZ Funds Active Growth Series

October 2026

More growth exposure for your money

Diversification & long-term capital appreciation

Macro investing enables investors to own a wide range of non-correlated asset classes, which have the potential to rise in value over time. Over longer periods of time, investors are likely to experience a wide variety of challenges. In recent times, these have included COVID, inflation, geopolitical tension, regional conflicts, climate change and political change. Many changes negatively impact share market returns, but result in capital gains for other asset types such as bonds and gold.

The Global Macro Portfolio owns a range of asset types, with the goal of ensuring that, irrespective of the state of the world, there are assets in the Portfolio which should be able to generate attractive capital gains over time. These asset types may include Gold, Silver, Government Bonds, Currencies (including Crypto), Credit Indices as well as local and international shares.

Access assets & instruments used by professionals

Assets like Gold, Silver, Government Bonds and Credit Index exposure can be difficult to purchase and expensive to hold directly. They are usually only available in a professionally-managed portfolio. The Global Macro Portfolio enables long-term private investors to own many of the same asset types that large, long-term professionally-managed investment companies own.

The Portfolio may also hold emerging asset types, such as Bitcoin and Ethereum which may come with heightened levels of volatility, but over time have the potential to appreciate significantly more in value than established asset types like shares and bonds.

Highly liquid & convenient

Many of the asset types held are not easily accessible for private individuals, and may be difficult to purchase or sell (to fund deposits or redemptions) if held by an individual. By accessing these asset types through a professionally-managed PIE portfolio, investors can deposit or withdraw in a highly liquid manner small or large amounts whenever they wish. These amounts will be taken from (or applied to) all the asset types in the Portfolio. This ensures continuous asset exposure with high levels of liquidity and convenience.

The Global Macro Portfolio forms part of the NZ Funds Active Growth Series which is a Registered Managed Investment Scheme and a Portfolio Investment Entity (PIE). A Product Disclosure Statement (PDS) is available on request or by visiting the NZ Funds website at www.nzfunds.co.nz. New Zealand Funds Management Limited is the issuer of the NZ Funds Active Series.

* This is the annualised return of the Portfolio since inception. Returns are before NZ Funds' management fees, but after all fund expenses & performance fees, and after investor tax at 28%. Individual tax rates may be lower. NZ Funds' management fees vary by investment amount or by arrangement. See the PDS for more details.

The market index for the Portfolio is the MSCI All Countries World Daily TR Net Local Currency Index. Over the same period the market index returned 10.09% p.a. with no deduction for expenses or performance fees and after investor tax at 28%. In addition to the market index, the performance of certain asset classes held by the Portfolio can be illustrated by the following indices: the Bloomberg Commodity Total Return Index which returned 1.32% p.a. and the S&P U.S. Treasury Bond Current 10-Year Return Index which returned 1.74% p.a. These index returns are also stated with no deduction for expenses or performance fees and after investor tax at 28%. You cannot invest in these indices and these indices do not take Environmental, Social and Governance (ESG) factors into account.

NZ Funds takes Environmental, Social and Governance (ESG) criteria into account in its investment decisions. This impacts on our investment choices. Our ESG criteria are set out in the NZ Funds Active Series SIPO. NZ Funds is an active manager so the securities listed above may not be held in the future. Past performance is not an indicator of future returns. A full list of securities held by the Strategy is available through NZ Funds Digital Wallet. Rounding may affect totals.
